Disable Soft Navigation Keys Soft Navigation keys are Home Button, Recent Apps Button and Back button on the devices (smartphone or tablet). Select Disable Soft Navigation Keys option to disable these keys on the device. Note: This feature is supported only on platform signed devices. Stay organized with collections Save and categorize content based on your preferences. A floating action button (FAB) is a circular button that triggers the primary action in your app's UI. This page shows you how to add the FAB to your layout, customize some of its appearance, and respond to button taps. To learn more about how to design a floating action button into your app according to the Material Design Guidelines, also see Buttons: Floating Action Button. Figure 1. A floating action button Add the floating action button to your layout The following code shows how the FloatingActionButton should appear in your layout file: By default, the FAB is colored by the colorAccent attribute, which you can customize with the theme's color palette. You can configure other FAB properties using either XML attributes or corresponding methods, such as the following: The size of the FAB, using the app:fabSize attribute or the setSize() method. The ripple color of the FAB, using the app:rippleColor attribute or the setRippleColor() method. The FAB icon, using the android:src attribute or the setImageDrawable() method. Respond to button taps You can then apply an View.OnClickListener to handle FAB taps. For example, the following code displays a Snackbar when the user taps the FAB: val fab: View = findViewById(R.id.fab) fab.setOnClickListener { view -> Snackbar.make(view, "Here's a Snackbar", Snackbar.LENGTH_LONG) .setAction("Action", null) .show() } FloatingActionButton fab = findViewById(R.id.fab); fab.setOnClickListener(new View.OnClickListener() { @Override public void onClick(View view) { Snackbar.make(view, "Here's a Snackbar", Snackbar.LENGTH_LONG) .setAction("Action", null).show(); } }); For more information on the capabilities of the FAB, see the API reference for the FloatingActionButton. Last updated 2022-09-28 UTC. [{ "type": "thumb-down", "id": "missingTheInformationINeed", "label":"Missing the information I need" },{ "type": "thumb-down", "id": "tooComplicatedTooManySteps", "label":"Too complicated / too many steps" },{ "type": "thumb-down", "id": "outOfDate", "label":"Out of date" },{ "type": "thumb-down", "id": "samplesCodeIssue", "label":"Samples / code issue" },{ "type": "thumb-down", "id": "otherDown", "label":"Other" }] [{ "type": "thumb-up", "id": "easyToUnderstand", "label":"Easy to understand" },{ "type": "thumb-up", "id": "solvedMyProblem", "label":"Solved my problem" },{ "type": "thumb-up", "id": "otherUp", "label":"Other" }] I've looked around for this answer, but most people seem to want to do the opposite. What I'm trying to do is always display the soft keys, even in immersive mode. Android 6.0 Running an X64 device so using xposed isn't possible. The reason I want this is for my kids. They haven't learned to swipe up well yet, they are used to ipad physical keys. There is a physical key on the device that can be mapped, but it's not detected by button mapping. Long press activates a projector, I thought I could use a single press to take it to the home screen... The other issue is the cases on their devices block the bottom area a little bit, so swiping up is difficult. Instead of a floating keys app, I'd like to be able to display the system soft keys all the time. Anyone know how to accomplish this? If you are looking for a button controls that can float on top of any active application in Android, then you must try an app called "Floating Soft Keys". The application was developed by a recognized XDA developer rhoadster91. As the name says, the app lets you float navigation buttons including back, home and menu keys on top of current active application. You can also drag the buttons around the screen via drag icon. The app comes with a customization settings, that lets you to easily adjust transparency level of the buttons, size and padding between the buttons. By default, the navigation buttons will feature gray colored icons, but you can choose your own custom icons with the help of guide available at XDA developers forum.Are you worried that app will make it difficult to access Google Now or any shortcut you have associated with the home button? You can easily change the action of a long press of home button, but currently only Google Now and power buttons are supported.What you need to use Floating Soft Keys?Well, you must have rooted your device.Thanks to the developer, who made the application available as open source, so you can make some changes to your liking. Floating Soft Keys will work on Android version 2.2 or over and it doesn't feature any ads.Download Floating Soft Keys from Google Play Store and Checkout all Android related tips and tricks here... Soft Keys - Home Back Button (Package Name: com.dogusumit.ortatus) is developed by dogusumit and the latest version of Soft Keys - Home Back Button 4.0 was updated on August 9, 2017. Soft Keys - Home Back Button is in the category of Tools. You can check all apps from the developer of Soft Keys - Home Back Button and find 56 alternative apps to Soft Keys - Home Back Button on Android. Currently this app is for free. This app can be downloaded on Android 4.1+ on APKFab or Google Play. All APK/XAPK files on APKFab.com are original and 100% safe with fast download. New Version Released ! Soft Keys 2 - Home Back Button the on-screen keys, enjoy it! Don't need root.This app uses Accessibility services.source codes : to use ?-open app, enable permissions if asked- set location, size ...- click "Settings-Accessibility" button- find "Soft Keys - Home Back Button" and enable it New Version is Out ! Read More * Requires rooted phones. If you don't know what root is, your phone is probably not rooted *Ever felt that the default soft keys are too bulky? Or want to protect your Home hard button from wearing off? Then this app is just for you.Presenting Floating Soft Keys.This app makes use of pingpongboss's StandOut libraries to make small (and resizable) soft keys that you can drag anywhere across the screen. For devices with soft keys as default navigational controls, this app is most effective when used in combination with CyanogenMod's or ParanoidAndroid's expanded desktop mode.The app has been tested to work properly on Nexus 4. If the app is not working on your device, let me know.DISCLAIMER: Although the app isn't designed to harm and is safe as far as I can tell, if something happens to your phone due to this app / during the use of this app, please do not blame me. You can contact me for support and I'll try my best to help you, but my help will not include "monetary help". Use at your own risk.FEATURES==========- Resizable soft keys- Adjustable spacing- Adjustable transparency- Movable, will stay on top of all windows (floating) thanks to pingpongboss's StandOut library- Ability to lock (anchor) bar at a particular place- Multiple app shortcuts in home long press action- For Android 4.1+ added support for navbar inside the notification shade (especially useful for ParanoidAndroid Halo 2.0 users)- Custom icon support added (For more info about custom icon themes, visit the XDA thread: actions:=================- Back Button (Collapse soft keys on long press)- Home Button (customizable action on long press)- Power and Power-Long-Press (shows up if you long press home button)- Menu Button (Show Recents on long press)- Volume control (+/-) (shows up if you long press home button)- Volume Button (Show Recents on long press)- DragIf you find any bugs or want to see more features, write an email to me rather than downrating the app.You can check out the code on GitHub too: Accessibility shortcuts are a quick way to turn on accessibility apps or switch between apps. For each accessibility app, you can choose the shortcut that you want to use. Contents Step 1: Set up accessibility shortcuts Optional: Change device navigation to buttons or gestures Three-button navigation Gesture navigation Step 2: Use accessibility shortcuts Developers: Add the accessibility button Get help Step 1: Set up accessibility shortcuts You can set up as many shortcuts as you like for the accessibility apps that you use on your Android device. On your device, open the Settings app. Tap Accessibility. Select the app that you want to use with a shortcut. Select the shortcut setting, like TalkBack shortcut or Magnification shortcut. Choose a shortcut: Tap accessibility button: Tap the Accessibility button on your screen. Hold volume keys: Touch and hold both volume keys. Two-finger swipe up from bottom, or three-finger swipe if TalkBack is on. Triple-tap screen, available for Magnification only. Tap Save. Optional: Change device navigation to buttons or gestures On many devices, you can choose between 3-button navigation and gesture navigation. On your device, open the Settings app. Select System Gestures System navigation. Choose your new navigation option. There are different shortcuts available for the 2 navigation types: Three-button navigation: Accessibility button in the navigation bar Floating accessibility button Gesture navigation: Floating accessibility button Gesture navigation Two-finger swipe up If TalkBack is on, 3-finger swipe up Tip: If you can't find the accessibility button or gesture navigation, ask your device manufacturer how to show navigation buttons. Step 2: Use accessibility shortcuts After you turn on accessibility shortcuts, you can use them to start your accessibility apps or switch between accessibility apps. Read the tips below for each shortcut. Tap accessibility button Start an app: In your navigation bar, tap Accessibility . Switch between apps: If you've assigned more than one app to use the accessibility button, touch and hold Accessibility . In the menu, select the new app. Tap floating accessibility button. Move the floating accessibility button. Resize the floating accessibility button: Touch and drag the floating accessibility button towards the edge of the screen to make it smaller. Change floating accessibility button settings On your device, open the Settings app. Select Accessibility Accessibility button. To choose whether you tap the floating accessibility button: Under "Location", select Floating over other apps. To change the size of the buttons: Select Size and choose a new size. To set transparency and fade: Use the slider to set transparency when not in use. Two-finger swipe up from bottom, or, if TalkBack is on, three-finger swipe Start an app: From the bottom of the screen, swipe up with two fingers, or with three fingers if TalkBack is on. Switch between apps: If you've assigned more than one app to use the accessibility button, swipe up with three fingers and hold, or with three fingers if TalkBack is on, then lift your fingers. In the menu, select the new app. Volume key shortcut Start an app: Press and hold both volume keys until the menu appears and select the app you want to use. Switch between apps: Press and hold both volume keys. When the shortcut menu opens, select the app that you want to use. Choose which apps start with the volume key shortcut: Press and hold both volume keys. When the shortcut menu opens, select Edit shortcuts. Choose features to use with this shortcut, then tap Done. Developers: Add the accessibility button Learn how to use the Accessibility button in your accessibility service.
